Cámara Chilena de la Construcción

1998

CAMARA CHILENA DE LA CONSTRUCCION CHILEAN CHAMBER OF BUILDING AND CONSTRUCTION

In this trade association, construction companies, industry experts, suppliers and specialists, coordinate and design joint plans of action. These tasks are performed by the members of the Trade Committees according to their respective activities. Its structure includes a Board of Directors, chosen by a National Council composed by 230 members that represent the main office and sixteen regional branches. This council receives the advice of various specialized commissions when faced with specific subjects. All of this allows us to assure effective participation in the activities and decisions of the Trade Association.

The management of the Cámara Chilena de la Construcción has a nationwide unifying effect, that is expressed by the 16 Delegations located in every region of the country.

Construction is recognized as one of the most dynamic economic activities, and the one that has, the greatest multiplying effect upon the development of the national productive structure. These characteristics, together with the responsibility that the construction companies have assumed to reduce the housing deficit, and their vocation to community service, has left an unmistakable mark on Chilean construction activities.

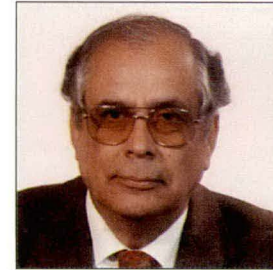

Along with its technical and trade association responsibilities, the construction trade association assigns great importance to social work. This is why, for more than 45 years, the Cámara has founded various organizations in order to cover the needs of its workers, that comprise the social security area, health care, education, training, and culture. All these corporations now form part of the Social Network of the Cámara Chilena de la Construcción.

In the international scene, the Cámara Chilena de la Construcción is an active member of the Interamerican Federation of the Building Industry, an institution integrated by the national federations of construction companies and businessmen throughout Latin America, with its main office in Mexico.

The Cámara Chilena de la Construcción, as dictated in its Declaration of Principles, approved by the National Council in 1994, was defined as a trade association that upholds the values, ethics and principles that are directed by its dedicated humanist vocation to service, which has developed its fraternal, mutually binding, democratic, and participative spirit.

Those who join the institution must share this spirit, and anyone who does not respect these values or principles shall not remain as a member.

MUTUAL DE SEGURIDAD C.CH.C.

Mr. Luis Ferrada
Assistant Manager Environmental Health

Alameda 4848, Santiago
Telephone: (56-2) 779 8007
Facsimile: (56-2) 779 5663
